This Year

- 2hr Meetings Friday 6-8pm in Hutch
  - ~30min Strategy Lecture → ~1.5hr Playing
- Last Week's Lecture
  - How to Play
  - Turn Based Decisions
    - Street Play
  - Hand Rankings
  - Position
  - Basic Strategy
- This Week
  - Recap of Last Week's Play
  - Preflop
  - Poker Math

Ask Questions!

Last Friday - What We Saw

CONTINUE

- Posting blinds
- Attacking weakness
  - Squeezing dead money
- Making assumptions
- Playing Tight and Aggressive
- Having fun

LIMIT

- Passivity
- Giving away information
  - Out-of-turn actions
  - Poker Face
  - Showing mid hand
- Overvaluing Hand Strength
  - Multiway
- Large Raise First In (RFI)
- Playing too loose

Poker Math (1) Pot Odds.

Equity Required = Bet / (Pot + 2*Bet)

Q: On the river, someone bets 50% of the pot (b50) and you believe you have the best hand 30% of the time. Should you call or fold?

A: 0.5/(1 + 2*0.5) = 0.25 = 25% equity required to call. **CALL. (You have a 5% equity surplus).**

Poker Math (2) Equity Calculation

- Calculate Outs
  - How many cards do you need to improve?
- 4x and 2x Rule (Rough Estimate)
  - If there are 2 cards to come (flop): 4 x Outs = Equity
  - If there is 1 card to come (turn): 2 x Outs = Equity

Poker Math (3) Combining Pot Odds and Equity

- OTF, we have T9s. The pot is 30. Can we call a bet of 10 (b33)?
  - Outs → Equity:
  - Pot odds needed to call 10 →
  - Equity >= Pot Odds?
- OTT, the pot is 50. Can we call a bet of 100 (b200)?
  - Outs → Equity:
  - Pot odds needed to call 100?
  - Equity >= Pot Odds?

Poker Math (3) Combining Pot Odds and Equity

- OTF, we have T9s. The pot is 30. Can we call a bet of 10 (b33)?
  - Outs → Equity:
    - 15 outs x 4 = ~60%
  - Pot odds needed to call 10 →
    - 10 / (30 + (2 * 10)) = 20%
  - Equity >= Pot Odds?
    - ~60% > 20%
- OTT, the pot is 50. Can we call a bet of 100 (b200)?
  - Outs → Equity:
  - Pot odds needed to call 100 →
  - Equity >= Pot Odds?

Poker Math (3) Combining Pot Odds and Equity

- OTF, we have T9s. The pot is 30. Can we call a bet of 10 (b33)?
  - Outs → Equity:
    - 15 outs x 4 = ~24%
  - Pot odds needed to call 15, 25, 50 →
    - 10 / (30 + (2 * 10)) = 20%
  - Equity >= Pot Odds?
    - ~60% > 20%
- OTT, the pot is 50. Can we call a bet of 100 (b200)?
  - Outs → Equity:
    - 15 outs x 2 = ~30%
  - Pot odds needed to call 100 →
    - 100 / (50 + (2 * 100)) = 40%
  - Equity >= Pot Odds?
    - ~30% < 40%

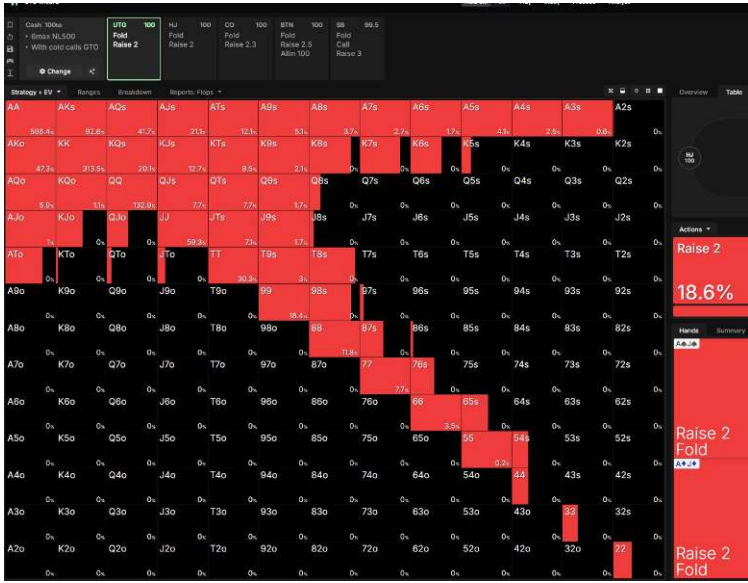

Preflop Fundamentals

- Limit Passive Actions
  - Limping
  - Cold-Calling
    - Opens and 3bets
- RFI Size: 2.5bb + 1bb per limper.
- 3bet Size: Generally 3x + dead money
- 6-8 handed: Play around 20% of hands
  - Position matters!

How to Play - Beginner Strategy

1. Hide your cards!
2. Keep chips organized and in stacks
3. Beginner Strategy
    a. Play aggressively preflop (Raise or fold)
    b. Try to think about how much your hand ranking is worth
    c. Don’t overvalue hands multiway

Weekly PNL Playing Session

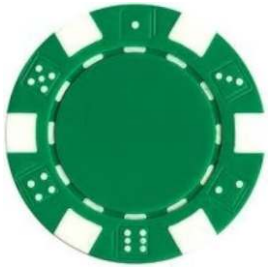

- 1.5hour freezeout (Ends 7:
- $1/2 $250 starting stack

$1

$5

$25

$100
